

Our most versatile welder

The T600 Extreme Flex will easily allow you to seam your panels together and finish edges of larger panels faster than any other technology on the market. With its longer throat the T600 will increase your production while decreasing fabric handling.

T600 Extreme Flex Seam Types:

Overlap

Hem

Hem with Pocket

Hem with Rope

TG3600 TRAVELING GEOMEMBRANE

Geomembrane liner and cover fabricator

The TG3600 series efficiently produces any size liner or cover and is designed to reduce excessive fabric handling. By using our exclusively designed welding and pulling system, the TG3600 will dramatically reduce labor and increase production. We will completely customize a complete welding system for you to meet your exact production needs.

- Track assembly to accommodate any distance
- Dual hot air welding systems for increased productivity
- Traverse pulling and welding for reduced labor

Seamvision is a comprehensive inspection system designed to provide another level of measuring seam integrity. It is a continuous analysis for standard and automated solutions that require non-contact imaging and temperature measurements.

Captures monitored seam with individual measurement positions

Seam monitoring alarms to alert operators and for secondary spot checks

Consistent data output into CSV file thru USB for quality reporting and records-keeping
